The unvarnished half of the chips represents wood finished with one coat of oil stain.

DEVOE OIL STAIN

Devoe Oil Stain is manufactured for the express purpose of staining new or old unfinished hard or soft wood.

It also accentuates the natural grain of the wood owing to the fact that the stain penetrates deeper into the softer portions of the wood than it does into the harder portions, which naturally produces the artistic high-light effect generally desired.

Devoe Oil Stain is manufactured only in the rich, beautiful, effective tones prevalent in well finished expensive woods.

When the tones of unfinished hardwoods do not blend in with the color scheme selected, or are not rich enough in color to satisfy the demand of the discriminating home owner, they can readily be tinted up to the desired shade with the application of one coat of Devoe Oil Stain.

Ofttimes when the cost of hardwoods, such as Oak, Walnut and Mahogany, makes their use prohibitive for certain kinds of work, the softer woods, such as Pine, Gum, etc., are used.

Such woods when properly treated with one coat of Devoe Oil Stain will readily develop the rich tone effects found in the harder and more expensive woods.

Devoe Oil Stain is easy to apply, and its use will certainly add greatly to the beauty of any home.

After either soft or hard wood has been treated with Devoe Oil Stain, the application of Devoe Varnish or Devoe Wax will, to a noticeable extent, enhance the beauty of the color produced.

AVERY LIBRARY

The use of either of these products will also add considerable to the durability of the article or surface finished.

It will likewise add to the permanence of the color used, as it will put a renewable surface on top of the wood which, when destroyed by natural wear, can be easily replaced by another application of the same material.

This treatment is very desirable on interior surfaces and absolutely necessary on exterior surfaces such as doors which have been treated with Oil Stain.

For the purpose of securing the utmost in durability and beauty where the high, brilliant lustre of varnish is desired, use Devoe Marble Floor Finish Varnish on the floors, Devoe Pale Interior Varnish on all upright work, such as interior doors, woodwork and casings, and Devoe Aquaspar on exterior work such as front doors, etc.

Where a polished, even glow is desired on either floors or woodwork, use Devoe Wax. Its use will give the room an added atmosphere of richness and good taste.

Devoe Marble Floor Finish Varnish is unusually elastic and durable. It will not turn white when subjected to the most severe tests and will stand hard wear for a great length of time.

Devoe Pale Interior Varnish possesses an unusually high gloss, is heavy bodied and has a beautiful color which will accentuate the beauty of the stain and keep the surface in a satisfactory condition even when subjected to unusually hard use.

Devoe Aquaspar will resist the destructive action of the elements for an unusual length of time, and consequently affords the greatest possible protection to the finished surface.

Devoe Wax is easy to apply, polishes readily and can be used with perfect satisfaction on either floors, furniture or woodwork.

Use a Devoe Superkleen Brush for best results.
